

CLASS IX: MATHS  
Chapter 1: Number System

Questions and Solutions | EXERCISE 1.3 - NCERT Books

**Q1.** Write the following in decimal form and say what kind of decimal expansion each has :

- (i)  $\frac{36}{100}$       (ii)  $\frac{1}{11}$       (iii)  $4\frac{1}{8}$   
 (iv)  $\frac{3}{13}$       (v)  $\frac{2}{11}$       (vi)  $\frac{329}{400}$

**Sol.** (i)  $\frac{36}{100} = 0.36$  (Terminating)

(ii)  $\frac{1}{11} = 0.090909\dots$  (Non terminating Repeating)

$$\begin{array}{r} 11 \overline{) 1.00000} \phantom{00} \\ \underline{-99} \phantom{00} \\ 100 \phantom{00} \\ \underline{-99} \phantom{00} \\ 100 \phantom{00} \\ \underline{-99} \phantom{00} \\ 1 \phantom{00} \end{array} \quad 0.090909\dots$$

(iii)  $4\frac{1}{8} = \frac{33}{8} = 4.125$  (Terminating decimal)

(iv)  $\frac{3}{13} = 0.230769230769\dots$

$= 0.\overline{230769}$  (Non Terminating repeating)

(v)  $\frac{2}{11} = 0.1818\dots = 0.\overline{18}$  (Non Terminating repeating)

(vi)  $\frac{329}{400}$   $400 \overline{) 329.0000} (0.8225$

$$\begin{array}{r} 329.0000 \\ \underline{320\ 0} \\ 900 \\ \underline{800} \\ 1000 \\ \underline{800} \\ 2000 \\ \underline{2000} \\ \times \end{array}$$

$\frac{329}{400} = 0.8225 \Rightarrow$  (Terminating)

**Q2.** You know that  $\frac{1}{7} = 0.\overline{142857}$ . Can you predict what the decimal expansion of  $\frac{2}{7}, \frac{3}{7}, \frac{4}{7}, \frac{5}{7}, \frac{6}{7}$  are, without actually doing the long division ? If so, how ?

**Sol.** Yes, we can predict decimal expansion without actually doing long division method as

$$\frac{2}{7} = 2 \times \frac{1}{7} = 2 \times 0.\overline{142857} = 0.\overline{285714}$$

$$\frac{3}{7} = 3 \times \frac{1}{7} = 3 \times \overline{.142857} = \overline{.428571}$$

$$\frac{4}{7} = 4 \times \frac{1}{7} = 4 \times \overline{.142857} = \overline{.571428}$$

$$\frac{5}{7} = 5 \times \frac{1}{7} = 5 \times \overline{.142857} = \overline{.714285}$$

$$\frac{6}{7} = 6 \times \frac{1}{7} = 6 \times \overline{.142857} = \overline{.857142}$$

**Q3.** Express the following in the form  $p/q$ , where  $p$  and  $q$  are integers and  $q \neq 0$ .

(i)  $0.\overline{6}$                       (ii)  $0.4\overline{7}$                       (iii)  $0.0\overline{001}$

**Sol.** (i) Let  $x = 0.6666\dots$                       (1)

Multiplying both the sides by 10.

$$10x = 6.666\dots \quad (2)$$

Subtract (1) from (2)

$$10x - x = (6.666\dots) - (0.6666\dots)$$

$$\Rightarrow 9x = 6 \Rightarrow x = \frac{6}{9} = \frac{2}{3}$$

(ii) Let  $x = 0.4\overline{7} = .4777\dots$

Multiply both sides by 10

$$10x = 4.\overline{7} \quad \dots(1)$$

Multiply both sides by 10

$$100x = 47.\overline{7} \quad \dots(2)$$

Subtract (1) from (2)

$$90x = 43$$

$$x = \frac{43}{90}$$

(iii) Let  $x = 0.\overline{001} = 0.001001001\dots$                       ... (1)

Multiply both sides by 1000

$$1000x = 1.\overline{001} \quad \dots(2)$$

Subtract (1) from (2)

$$999x = 1$$

$$x = \frac{1}{999}$$

**Q4.** Express 0.99999 ..... in the form p/q. Are you surprised by your answer ? With your teacher and classmates discuss why the answer makes sense.

**Sol.** Let  $x = 0.999\dots$  .....(1)

Multiply both sides by 10 we get

$$10x = 9.99\dots \quad \dots(2)$$

Subtract (1) from (2)

$$9x = 9 \Rightarrow x = 1$$

$$.9999\dots = 1 = \frac{1}{1}$$

$$\therefore p = 1, q = 1$$

**Q5.** What can the maximum number of digits be in the repeating block of digits in the decimal expansion of  $1/17$  ? Perform the division to check your answer.

**Sol.** Maximum no. of digits in the repeating block of digits in decimal expansion of  $\frac{1}{17}$  can be 16.

$$\begin{array}{r}

 \underline{136} \\
 4
 \end{array}$$

**Ans.** .0588235294117647

**Q6.** Look at several examples of rational numbers in the form  $\frac{p}{q}$  ( $q \neq 0$ ), where  $p$  and  $q$  are integers with no common factors other than 1 and having terminating decimal representations (expansions). Can you guess what property  $q$  must satisfy ?

**Sol.** There is a property that  $q$  must satisfy rational no. of form  $\frac{p}{q}$  ( $q \neq 0$ ) where  $p, q$  are integers with no common factors other than 1 having terminating decimal representation (expansions) is that the prime factorization of  $q$  has only powers of 2 or powers of 5 or both [i.e.,  $q$  must be of the form  $2^m \times 5^n$ ]. Here  $m, n$  are whole numbers.

**Q7.** Write three numbers whose decimal expansion are non-terminating non-recurring.

**Sol.** 0.01001000100001...  
 0.202002000200002...  
 0.003000300003...

**Q8.** Find three different irrational numbers between the rational numbers  $\frac{5}{7}$  and  $\frac{9}{11}$ .

**Sol.**  $7 \overline{)5.000000} (0.714285...$

$$\begin{array}{r}
 49 \\
 \hline
 10 \\
 7 \\
 \hline
 30 \\
 28 \\
 \hline
 20 \\
 14 \\
 \hline
 60 \\
 56 \\
 \hline
 40 \\
 35 \\
 \hline
 5
 \end{array}$$

Thus,  $\frac{5}{7} = 0.\overline{714285}$

$\frac{9}{11} = 11 \overline{)9.0000} (0.8181...$

$$\begin{array}{r}
 88 \\
 \hline
 20 \\
 11 \\
 \hline
 90 \\
 88 \\
 \hline
 20 \\
 11 \\
 \hline
 9
 \end{array}$$

Thus,  $\frac{9}{11} = 0.\overline{81}$

Three different irrational numbers between

$\frac{5}{7}$  and  $\frac{9}{11}$  are taken as

0.750750075000750000...

0.780780078000780000...

0.80800800080000800000...

**Q9.** Classify the following numbers as rational or irrational :

- (i)  $\sqrt{23}$                       (ii)  $\sqrt{225}$                       (iii) 0.3796  
(iv) 7.478478 .....        (v) 1.101001000100001.....

**Sol.** (i)  $\sqrt{23}$  = irrational number

(ii)  $\sqrt{225}$  = 15 = Rational number

(iii) 0.3796 decimal expansion is terminating

⇒ .3796 = Rational number.

(iv) 7.478478...

=  $7.\overline{478}$  which is non terminating recurring.

= Rational number.

(v) 1.101001000100001.....

decimal expansion is non terminating and non repeating.

= Irrational number
