**∛Saral** 

## Class X : MATH Chapter - 6 : Triangles Questions & Answers - Exercise : 6.2 - NCERT Book

Q1. In figure, (i) and (ii), DE || BC. Find EC in (i) and AD in (ii).

Sol. (i) In figure, (i) DE || BC (Given)

 $\Rightarrow \frac{AD}{DB} = \frac{AE}{EC} (By Basic Proportionality Theorem)$  $\Rightarrow \frac{1.5}{3} = \frac{1}{EC}$ {:: AD = 1.5 cm, DB = 3 cm and AE = 1 cm}  $\Rightarrow EC = \frac{3}{1.5} = 2 cm$ 

(ii) In fig. (ii) DE BC (given)

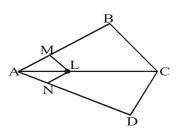

- So,  $\frac{AD}{BD} = \frac{AE}{CE} \Rightarrow \frac{AD}{7.2} = \frac{1.8}{5.4}$ {:: BD = 7.2, AE = 1.8 cm and CE = 5.4 cm} AD = 2.4 cm
- **Q2.** E and F are points on the sides PQ and PR respectively of a  $\Delta$ PQR. For each of the following cases, State whether EF || QR :
  - (i) PE = 3.9 cm, EQ = 3 cm, PF = 3.6 cm and FR = 2.4 cm.
  - (ii) PE = 4 cm, QE = 4.5 cm, PF = 8 cm and RF = 9 cm.
  - (iii) PQ = 1.28 cm, PR = 2.56 cm, PE = 0.18 cm and PF = 0.36 cm.

## **∛S**aral

**Q3.** In figure, if LM || CB and LN || CD, prove that  $\frac{AM}{AB} = \frac{AN}{AD}$ .

**Sol.** In  $\triangle ACB$  (see figure), LM || CB (Given)

$$\Rightarrow \frac{AM}{MB} = \frac{AL}{LC} \quad ...(1)$$

**\***Saral

(Basic Proportionality Theorem)

In  $\triangle$ ACD (see figure), LN || CD (Given)

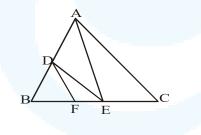

$$\Rightarrow \frac{AN}{ND} = \frac{AL}{LC} \quad ...(2)$$

(Basic Proportionality Theorem)

From (1) and (2), we get

$$\frac{AM}{MB} = \frac{AN}{ND}$$
$$\Rightarrow \frac{AM}{AM + MB} = \frac{AN}{AN + ND} \Rightarrow \frac{AM}{AB} = \frac{AN}{AD}$$

**Q4.** In figure, DE || AC and DF || AE. Prove that  $\frac{BF}{FE} = \frac{BE}{EC}$ .

Sol. In  $\triangle ABE$ ,

DF AE (Given)

 $\frac{BD}{DA} = \frac{BF}{FE}...(i)$  (Basic Proportionality Theorem) In ΔABC,

Class X Maths

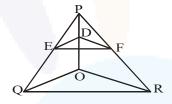

DE AC (Given)

 $\frac{BD}{DA} = \frac{BE}{EC}$ .....(ii) (Basic Proportionality Theorem) From (i) and (ii), we get

 $\frac{BF}{FE} = \frac{BE}{EC}$  Hence proved.

**Q5.** In figure, DE  $\parallel$  OQ and DF  $\parallel$  OR. Show that EF  $\parallel$  QR.

Sol. In figure, DE || OQ and DF || OR, then by Basic Proportionality Theorem,

and

We have

 $\frac{PE}{EQ} = \frac{PD}{DO} \quad \dots(1)$  $\frac{PF}{FR} = \frac{PD}{DO} \quad \dots(2)$ 

and

From (1) and (2),  $\frac{PE}{EQ} = \frac{PF}{FR}$ 

Now, in  $\triangle PQR$ , we have proved that

$$\Rightarrow \frac{PE}{EQ} = \frac{PF}{FR}$$

EF || QR

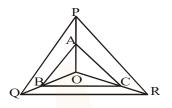

(By converse of Basic Proportionality Theorem)

**Q6.** In figure, A, B and C are points on OP, OQ and OR respectively such that AB || PQ and AC || PR. Show that BC || QR.

Class X Maths

Sol. In  $\triangle POQ$ ,

AB PQ (given)

 $\frac{OB}{BQ} = \frac{OA}{AP} \dots (i)$  (Basic Proportionality Theorem) In  $\triangle POR$ ,

AC ||PR (given)

 $\frac{OA}{AP} = \frac{OC}{CR}$  ...(ii) (Basic Proportionality Theorem)

From (i) and (ii), we get

$$\frac{OB}{BQ} = \frac{OC}{CR}$$

: By converse of Basic Proportionality Theorem,

- BCQR
- Q7. Using Theorem 6.1, prove that a line drawn through the mid-point of one side of a triangle parallel to another side bisects the third side.
- **Sol.** In  $\triangle ABC$ , D is mid point of AB (see figure)

i.e.,  $\frac{AD}{DB} = 1$  ...(1)

Straight line  $\ell \parallel BC$ .

Line  $\ell$  is drawn through D and it meets AC at E.

By Basic Proportionality Theorem

 $\frac{AD}{DB} = \frac{AE}{EC} \implies \frac{AE}{EC} = 1 \text{ [From (1)]}$ 

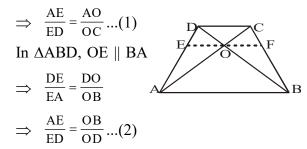

- $\Rightarrow$  AE = EC  $\Rightarrow$  E is mid point of AC.
- **Q8.** Using Theorem 6.2, prove that the line joining the mid-points of any two sides of a triangle is parallel to the third side.
- Sol. In  $\triangle ABC$ , D and E are mid points of the sides AB and AC respectively.

 $\Rightarrow \frac{AD}{DB} = 1$ and  $\frac{AE}{EC} = 1$  (see figure)

 $\Rightarrow \frac{AD}{DB} = \frac{AE}{EC} \Rightarrow DE \parallel BC$ 

(By Converse of Basic Proportionality Theorem)

- **Q9.** ABCD is a trapezium in which AB || DC and its diagonals intersect each other at the point O. Show that  $\frac{AO}{BO} = \frac{CO}{DO}$ .
- Sol. We draw EOF || AB(also || CD) (see figure) In  $\triangle$ ACD, OE || CD

From (1) and (2)  $\frac{AO}{OC} = \frac{OB}{OD},$ i.e.,  $\frac{AO}{BO} = \frac{CO}{DO}.$ 

Q10. The diagonals of a quadrilateral ABCD intersect each other at the point O such that  $\frac{AO}{BO} = \frac{CO}{DO}$ . Show that ABCD is a trapezium.

**Sol.** In figure  $\frac{AO}{BO} = \frac{CO}{DO}$  $\Rightarrow \frac{AO}{OC} = \frac{BO}{OD}$  ...(1) (given) Through O, we draw OE || BA OE meets AD at E. From  $\Delta DAB$ , R EO || AB  $\Rightarrow \frac{DE}{EA} = \frac{DO}{OB}$  (by Basic Proportionality Theorem)  $\Rightarrow \frac{AE}{ED} = \frac{BO}{OD} \quad ...(2)$ From (1) and (2),  $\frac{AO}{OC} = \frac{AE}{ED} \implies OE \parallel CD$ (by converse of basic proportionality theorem) Now, we have BA || OE OE || CD and  $AB \parallel CD$  $\Rightarrow$  $\Rightarrow$  Quadrilateral ABCD is a trapezium.
