Class X : MATH

## Chapter 13 : Statistics

## Questions \& Answers - Exercise : 13.1-NCERT Book

Q1. A survery was conducted by a group of students as a part of their environment awareness programme, in which they collected the following data regarding the number of plants in 20 houses in a locality. Find the mean number of plants per house.

| Number <br> of Plants | $0-2$ | $2-4$ | $4-6$ | $6-8$ | $8-10$ | $10-12$ | $12-14$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Number <br> of houses | 1 | 2 | 1 | 5 | 6 | 2 | 3 |

Which method did you use for finding the mean, and why?
Sol. Let us find mean of the data by direct method because the figures are small.

| (Number of <br> plants) Class | Number of <br> houses) <br> Frequency (f) | Class <br> marks ( $\mathrm{x}_{\mathrm{i}}$ ) | $\mathrm{f}_{\mathrm{i}} \times \mathrm{x}_{\mathrm{i}}$ |
| :---: | :---: | :---: | :---: |
| $0-2$ | 1 | 1 | 1 |
| $2-4$ | 2 | 3 | 6 |
| $4-6$ | 1 | 5 | 5 |
| $6-8$ | 5 | 7 | 35 |
| $8-10$ | 6 | 9 | 54 |
| $10-12$ | 2 | 11 | 22 |
| $12-14$ | 3 | 13 | 39 |
| Total | $\mathrm{n}=20$ |  | 162 |

We have, $\mathrm{n}=\Sigma \mathrm{f}_{\mathrm{i}}=20$ and $\Sigma \mathrm{f}_{\mathrm{i}} \mathrm{X}_{\mathrm{i}}=162$.
Then mean of the data is

$$
\overline{\mathrm{x}}=\frac{1}{\mathrm{n}} \times \Sigma \mathrm{f}_{\mathrm{i}} \mathrm{x}_{\mathrm{i}}=\frac{1}{20} \times 162=8.1
$$

Hence, the required mean of the data is 8.1 plants.

Q2. Consider the following distribution of daily wages of 50 workers of a factory.

| Daily wages <br> (in Rs.) | Number of <br> workers |
| :---: | :---: |
| $100-120$ | 12 |
| $120-140$ | 14 |
| $140-160$ | 8 |
| $160-180$ | 6 |
| $180-200$ | 10 |

Find the mean daily wages of the workers of the factory by using an appropriate method.

Sol.

| Daily <br> wages <br> (In Rs.) | No. of <br> workers <br> $\left(\mathbf{f}_{\mathbf{i}}\right)$ | Class <br> marks <br> $\left(\mathbf{x}_{\mathbf{i}}\right)$ | $\mathbf{f}_{\mathbf{i}} \mathbf{x}_{\mathbf{i}}$ |
| :---: | :---: | :---: | :---: |
| $100-120$ | 12 | 110 | 1320 |
| $120-140$ | 14 | 130 | 1820 |
| $140-160$ | 8 | 150 | 1200 |
| $160-180$ | 6 | 170 | 1020 |
| $180-200$ | 10 | 190 | 1900 |
| Total | $\mathbf{n}=\mathbf{5 0}$ |  | $\mathbf{7 2 6 0}$ |

We have $\Sigma \mathrm{f}_{\mathrm{i}}=50$ and $\Sigma \mathrm{f}_{\mathrm{i}} \mathrm{X}_{\mathrm{i}}=7260$
Mean $=\frac{\sum \mathrm{f}_{\mathrm{i}} \mathrm{x}_{\mathrm{i}}}{\sum \mathrm{f}_{\mathrm{i}}}=\frac{7260}{50}=145.2$

Q3. The following distribution shows the daily pocket allowance of children of a locality. The mean pocket allowance is Rs. 18. Find the missing frequency f.

| Daily pocket <br> Allowance (in Rs.) | Number of children |
| :---: | :---: |
| $11-13$ | 7 |
| $13-15$ | 6 |
| $15-17$ | 9 |
| $17-19$ | 13 |
| $19-21$ | f |
| $21-23$ | 5 |
| $23-25$ | 4 |

Sol. We may prepare the table as given below :

| Daily pocket <br> allowance <br> (in Rs.) | Number of <br> children (f.) | Class <br> mark (x.) | $\mathrm{d}_{\mathrm{i}}=\mathrm{x}_{\mathrm{i}}-18$ | $\mathrm{f}_{\mathrm{i}} \times \mathrm{d}_{\mathrm{i}}$ |
| :---: | :---: | :---: | :---: | :---: |
| $11-13$ | 7 | 12 | -6 | -42 |
| $13-15$ | 6 | 14 | -4 | -24 |
| $15-17$ | 9 | 16 | -2 | -18 |
| $17-19$ | 13 | 20 | 2 | 2 a |
| $19-21$ | 5 | 22 | 4 | 20 |
| $21-23$ | 4 | 24 | 6 | 24 |
| $23-25$ | $5 \mathrm{f}_{\mathrm{i}}=44+\mathrm{f}$ |  |  | $2 \mathrm{f}-40$ |

It is given that mean $=18$.
From the table, we have

$$
\mathrm{a}=18, \mathrm{n}=44+\mathrm{f} \text { and } \Sigma \mathrm{f}_{\mathrm{i}} \mathrm{~d}_{\mathrm{i}}=2 \mathrm{f}-40
$$

Now, $\quad$ mean $=\mathrm{a}+\frac{1}{\mathrm{n}} \times \Sigma \mathrm{f}_{\mathrm{i}} \mathrm{d}_{\mathrm{i}}$
Then substituting the values as given above, we have

$$
\begin{aligned}
& 18=18+\frac{1}{(44+\mathrm{f})} \times(2 \mathrm{f}-40) \\
& \Rightarrow \quad 0=\frac{2 \mathrm{f}-40}{44+\mathrm{f}} \Rightarrow \mathrm{f}=20
\end{aligned}
$$

Q4. Thirty women were examined in a hospital by a doctor and the number of heart beats per minute were recorded and summarised as follows. Find the mean heart beats per minute for
these women, choosing a suitable method.

| Number of heart <br> beats per minute | Number of women |
| :---: | :---: |
| $65-68$ | 2 |
| $68-71$ | 4 |
| $71-74$ | 3 |
| $74-77$ | 8 |
| $77-80$ | 7 |
| $80-83$ | 4 |
| $83-86$ | 2 |

Sol.

| No. of <br> heart <br> beats per <br> min | No. of <br> women <br> $\left(\mathbf{f}_{\mathbf{i}}\right)$ | Class <br> marks <br> $\left(\mathbf{x}_{\mathbf{i}}\right)$ | $\mathbf{f}_{\mathbf{i}} \mathbf{x}_{\mathbf{i}}$ |
| :---: | :---: | :---: | :---: |
| $65-68$ | 2 | 66.5 | 133 |
| $68-71$ | 4 | 69.5 | 278 |
| $71-74$ | 3 | 72.5 | 217.5 |
| $74-77$ | 8 | 75.5 | 604 |
| $77-80$ | 7 | 78.5 | 549.5 |
| $80-83$ | 4 | 81.5 | 326 |
| $83-86$ | 2 | 84.5 | 169 |
| Total | $\mathbf{n}=\mathbf{3 0}$ |  | $\mathbf{2 2 7 7}$ |

Mean $=\frac{\sum f_{\mathrm{f}_{\mathrm{i}}}}{\sum \mathrm{f}_{\mathrm{i}}}=\frac{2277}{30}=75.9$.

Q5. In a retail market, fruit vendors were selling mangoes kept in packing boxes. These boxes contained varying number of mangoes. The following was the distribution of mangoes according to the number of boxes.

| No. of <br> mangoes | $50-52$ | $53-55$ | $56-58$ | $59-61$ | $62-64$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| No. of <br> boxes | 15 | 110 | 135 | 115 | 25 |

Find the mean number of mangoes kept in a packing box. Which method of finding the mean did you choose?

Sol.

| Number <br> of <br> mangoes | Number <br> of <br> boxes $f_{i}$ | Class <br> mark <br> $x_{i}$ | $\mathbf{u}_{i}=\frac{x_{i}-57}{3}$ | $\mathrm{f}_{\mathrm{i}} \times \mathbf{u}_{i}$ |
| :---: | :---: | :---: | :---: | :---: |
| $50-52$ | 15 | 51 | -2 | -30 |
| $53-55$ | 110 | 54 | -1 | -110 |
| $56-58$ | 135 | 57 | 0 | 0 |
| $59-61$ | 115 | 60 | 1 | 115 |
| $62-64$ | 25 | 63 | 2 | 50 |
| Total | $\mathrm{n}=400$ |  |  | 25 |

$\mathrm{a}=57, \mathrm{~h}=2, \mathrm{n}=400$ and $\Sigma \mathrm{f}_{\mathrm{i}} \mathrm{u}_{\mathrm{i}}=25$.
By step deviation method,
Mean $=\mathrm{a}+\mathrm{h} \times \frac{1}{\mathrm{n}} \times \Sigma \mathrm{f}_{\mathrm{i}} \mathrm{u}_{\mathrm{i}}=57+2 \times \frac{1}{400} \times 25=57.19$

Q6. The table below shows the daily expenditure on food of 25 households in a locality.

| Daily expenditure <br> (in Rs.) | No. of <br> households |
| :---: | :---: |
| $100-150$ | 4 |
| $150-200$ | 5 |
| $200-250$ | 12 |
| $250-300$ | 2 |
| $300-350$ | 2 |

Find the mean daily expenditure on food by a suitable method.

Sol.

| Daily <br> Exp. <br> (in Rs.) | No. of <br> house <br> holds $\left(\mathbf{f}_{\mathbf{i}}\right)$ | Class <br> marks <br> $\left(\mathbf{x}_{\mathbf{i}}\right)$ | $\mathbf{f}_{\mathbf{i}} \mathbf{x}_{\mathbf{i}}$ |
| :---: | :---: | :---: | :---: |
| $100-150$ | 4 | 125 | 500 |
| $150-200$ | 5 | 175 | 875 |
| $200-250$ | 12 | 225 | 2700 |
| $250-300$ | 2 | 275 | 550 |
| $300-350$ | 2 | 325 | 650 |
| Total | $\mathbf{2 5}$ |  | $\mathbf{5 2 7 5}$ |

Mean $=\frac{\sum \mathrm{f}_{\mathrm{i}} \mathrm{x}_{\mathrm{i}}}{\sum \mathrm{f}_{\mathrm{i}}}=\frac{5275}{25}=211$
Q7. To find out the concentration of $\mathrm{SO}_{2}$ in the air (in parts per million, i.e., ppm ), the data was collected for 30 localities in a certain city and is presented below :

| Concentration of <br> $\mathrm{SO}_{2}($ in ppm$)$ | Frequency |
| :---: | :---: |
| $0.00-0.04$ | 4 |
| $0.04-0.08$ | 9 |
| $0.08-0.12$ | 9 |
| $0.12-0.16$ | 2 |
| $0.16-0.20$ | 4 |
| $0.20-0.24$ | 2 |

Find the mean concentration of $\mathrm{SO}_{2}$ in the air.

Sol.

| Concentration <br> of SO <br> $\mathbf{2}$ <br> (in <br> $\mathbf{p p m})$ | Frequency <br> $\left(\mathbf{f}_{\mathbf{i}}\right)$ | Class <br> marks <br> $\left(\mathbf{x}_{\mathbf{i}}\right)$ | $\mathbf{f}_{\mathbf{i}} \mathbf{x}_{\mathbf{i}}$ |
| :---: | :---: | :---: | :---: |
| $0-0.04$ | 4 | 0.02 | 0.08 |
| $0.04-0.08$ | 9 | 0.06 | 0.54 |
| $0.08-0.12$ | 9 | 0.10 | 0.90 |
| $0.12-0.16$ | 2 | 0.14 | 0.28 |
| $0.16-0.20$ | 4 | 0.18 | 0.72 |
| $0.20-0.24$ | 2 | 0.22 | 0.44 |
| Total | $\mathbf{3 0}$ |  | $\mathbf{2 . 9 6}$ |

Mean $=\frac{\sum \mathrm{f}_{\mathrm{i}} \mathrm{x}_{\mathrm{i}}}{\sum \mathrm{f}_{\mathrm{i}}}=\frac{2.96}{30}=0.098$.
Q8. A class teacher has the following absentee record of 40 students of a class for the whole term.
Find the mean number of days a student was absent.

| No. <br> of days | $0-6$ | $6-10$ | $10-14$ | $14-20$ | $20-28$ | $28-38$ | $38-40$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| No. of <br> students | 11 | 10 | 7 | 4 | 4 | 3 | 1 |

Sol.

| No. of <br> days | No. of <br> students <br> $\left(\mathbf{f}_{\mathbf{i}}\right)$ | Class <br> marks <br> $\left(\mathbf{x}_{\mathbf{i}}\right)$ | $\mathbf{f}_{\mathbf{i} \mathbf{x}_{\mathbf{i}}}$ |
| :---: | :---: | :---: | :---: |
| $0-6$ | 11 | 3 | 33 |
| $6-10$ | 10 | 8 | 80 |
| $10-14$ | 7 | 12 | 84 |
| $14-20$ | 4 | 17 | 68 |
| $20-28$ | 4 | 24 | 96 |
| $28-38$ | 3 | 33 | 99 |
| $38-40$ | 1 | 39 | 39 |
| Total | $\mathbf{4 0}$ |  | $\mathbf{4 9 9}$ |

Mean $=\frac{\sum \mathrm{f}_{\mathrm{i}} \mathrm{x}_{\mathrm{i}}}{\sum \mathrm{f}_{\mathrm{i}}}=\frac{499}{40}=12.475$

Q9. The following table gives the literacy rate (in percentage) of 35 cities. Find the mean literacy rate.

| Literacy <br> rate (in \%) | $45-55$ | $55-65$ | $65-75$ | $75-85$ | $85-95$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| No. of <br> cities | 3 | 10 | 11 | 8 | 3 |

Sol.

| Literacy <br> rate (in <br> \%) | No. of <br> cities <br> $\left(\mathbf{f}_{\mathbf{i}}\right)$ | Class <br> marks <br> $\left(\mathbf{x}_{\mathbf{i}}\right)$ | $\mathbf{f}_{\mathbf{i} \mathbf{x}_{\mathbf{i}}}$ |
| :---: | :---: | :---: | :---: |
| $45-55$ | 3 | 50 | 150 |
| $55-65$ | 10 | 60 | 600 |
| $65-75$ | 11 | 70 | 770 |
| $75-85$ | 8 | 80 | 640 |
| $85-95$ | 3 | 90 | 270 |
| Total | $\mathbf{3 5}$ |  | $\mathbf{2 4 3 0}$ |

$$
\text { Mean }=\frac{\sum \mathrm{f}_{\mathrm{i}} \mathrm{x}_{\mathrm{i}}}{\sum \mathrm{f}_{\mathrm{i}}}=\frac{2430}{35}=69.43
$$
