

CLASS VIII: Maths
Chapter 3: Understanding Quadrilaterals

Questions and Solutions | Exercise 3.3 - NCERT Books

Q1 :

Given a parallelogram ABCD. Complete each statement along with the definition or property used.

(i) $AD = \dots$

(ii) $\angle DCB = \dots$

(iii) $OC = \dots$

(i) In a parallelogram, opposite sides are equal in length.

$$AD = BC$$

(ii) In a parallelogram, opposite angles are equal in measure.

$$\angle DCB = \angle DAB$$

(iii) In a parallelogram, diagonals bisect each other.

$$\text{Hence, } OC = OA$$

(iv) In a parallelogram, adjacent angles are supplementary to each other.

$$\text{Hence, } m\angle DAB + m\angle CDA = 180^\circ$$

Q2 :

Consider the following parallelograms. Find the values of the unknowns x, y, z .

(i)

(ii)

(iii)

(iv)

(v)

Answer :

(i) $x + 100^\circ = 180^\circ$ (Adjacent angles are supplementary)

$x = 80^\circ$

$z = x = 80^\circ$ (Opposite angles are equal)

$y = 100^\circ$ (Opposite angles are equal)

(ii) $50^\circ + y = 180^\circ$ (Adjacent angles are supplementary)

$$y = 130^\circ$$

$x = y = 130^\circ$ (Opposite angles are equal)

$z = x = 130^\circ$ (Corresponding angles)

(iii) $x = 90^\circ$ (Vertically opposite angles)

$x + y + 30^\circ = 180^\circ$ (Angle sum property of triangles)

$$120^\circ + y = 180^\circ$$

$$y = 60^\circ$$

$z = y = 60^\circ$ (Alternate interior angles)

(iv) $z = 80^\circ$ (Corresponding angles)

$y = 80^\circ$ (Opposite angles are equal)

$x + y = 180^\circ$ (Adjacent angles are supplementary)

$$x = 180^\circ - 80^\circ = 100^\circ$$

(v) $y = 112^\circ$ (Opposite angles are equal)

$x + y + 40^\circ = 180^\circ$ (Angle sum property of triangles)

$$x + 112^\circ + 40^\circ = 180^\circ$$

$$x + 152^\circ = 180^\circ$$

$$x = 28^\circ$$

$z = x = 28^\circ$ (Alternate interior angles)

Q3 :

Can a quadrilateral ABCD be a parallelogram if

(i) $\angle D + \angle B = 180^\circ$

(ii) $AB = DC = 8 \text{ cm}$, $AD = 4 \text{ cm}$ and $BC = 4.4 \text{ cm}$

(iii) $\angle A = 70^\circ$ and $\angle C = 65^\circ$

Answer :

(i) For $\angle D + \angle B = 180^\circ$, quadrilateral ABCD may or may not be a parallelogram. Along with this condition, the following conditions should also be fulfilled.

The sum of the measures of adjacent angles should be 180° .

Opposite angles should also be of same measures.

(ii) No. Opposite sides AD and BC are of different lengths.

(iii) No. Opposite angles A and C have different measures.

Q4 :

Draw a rough figure of a quadrilateral that is not a parallelogram but has exactly two opposite angles of equal measure.

Answer :

Here, quadrilateral ABCD (kite) has two of its interior angles, $\angle B$ and $\angle D$, of same measures. However, still the quadrilateral ABCD is not a parallelogram as the measures of the remaining pair of opposite angles, $\angle A$ and $\angle C$, are not equal.

Q5 :

The measures of two adjacent angles of a parallelogram are in the ratio 3:2. Find the measure of each of the angles of the parallelogram.

Answer :

Let the measures of two adjacent angles, $\angle A$ and $\angle B$, of parallelogram ABCD are in the ratio of 3:2. Let $\angle A = 3x$ and $\angle B = 2x$

We know that the sum of the measures of adjacent angles is 180° for a parallelogram.

$$\angle A + \angle B = 180^\circ$$

$$3x + 2x = 180^\circ$$

$$5x = 180^\circ$$

$$x = \frac{180^\circ}{5} = 36^\circ$$

$$\angle A = \angle C = 3x = 108^\circ \text{ (Opposite angles)}$$

$$\angle B = \angle D = 2x = 72^\circ \text{ (Opposite angles)}$$

Thus, the measures of the angles of the parallelogram are 108° , 72° , 108° , and 72° .

Q6 :

Two adjacent angles of a parallelogram have equal measure. Find the measure of each of the angles of the parallelogram.

Answer :

Sum of adjacent angles = 180°

$$\angle A + \angle B = 180^\circ$$

$$2\angle A = 180^\circ \text{ (}\angle A = \angle B\text{)}$$

$$\angle A = 90^\circ$$

$$\angle B = \angle A = 90^\circ$$

$$\angle C = \angle A = 90^\circ \text{ (Opposite angles)}$$

$$\angle D = \angle B = 90^\circ \text{ (Opposite angles)}$$

Thus, each angle of the parallelogram measures 90° .

Q7 :

The adjacent figure HOPE is a parallelogram. Find the angle measures x , y and z . State the properties you use to find them.

$$y = 40^\circ \text{ (Alternate interior angles)}$$

$$70^\circ = z + 40^\circ \text{ (Corresponding angles)}$$

$$70^\circ - 40^\circ = z$$

$$z = 30^\circ$$

$$x + (z + 40^\circ) = 180^\circ \text{ (Adjacent pair of angles)}$$

$$x + 70^\circ = 180^\circ$$

$$x = 110^\circ$$

Q8 :

The following figures GUNS and RUNS are parallelograms. Find x and y . (Lengths are in cm)

(i)

(ii)

Answer :

(i) We know that the lengths of opposite sides of a parallelogram are equal to each other.

$$GU = SN$$

$$3y - 1 = 26$$

$$3y = 27$$

$$y = 9$$

$$SG = NU$$

$$3x = 18$$

$$x = 6$$

Hence, the measures of x and y are 6 cm and 9 cm respectively.

(ii) We know that the diagonals of a parallelogram bisect each other.

$$y + 7 = 20$$

$$y = 13$$

$$x + y = 16$$

$$x + 13 = 16$$

$$x = 3$$

Hence, the measures of x and y are 3 cm and 13 cm respectively.

Q9 :

In the above figure both RISK and CLUE are parallelograms. Find the value of x .

Answer :

Adjacent angles of a parallelogram are supplementary.

In parallelogram RISK, $\angle RKS + \angle ISK = 180^\circ$

$$120^\circ + \angle ISK = 180^\circ$$

$$\angle ISK = 60^\circ$$

Also, opposite angles of a parallelogram are equal.

In parallelogram CLUE, $\angle ULC = \angle CEU = 70^\circ$

The sum of the measures of all the interior angles of a triangle is 180° .

$$x + 60^\circ + 70^\circ = 180^\circ$$

$$x = 50^\circ$$

Q10 :

Explain how this figure is a trapezium. Which of its two sides are parallel

Answer :

If a transversal line is intersecting two given lines such that the sum of the measures of the angles on the same side of transversal is 180° , then the given two lines will be parallel to each other.

Here, $\angle NML + \angle MLK = 180^\circ$

Hence, $NM \parallel LK$

As quadrilateral KLMN has a pair of parallel lines, therefore, it is a trapezium.

Q11 : Find $m\angle C$ in the following figure if $\overline{AB} \parallel \overline{DC}$

Answer :

Given that, $\overline{AB} \parallel \overline{DC}$

$\angle B + \angle C = 180^\circ$ (Angles on the same side of transversal)

$120^\circ + \angle C = 180^\circ$

$\angle C = 60^\circ$

Q12 :

Find the measure of $\angle P$ and $\angle S$, if $\overline{SP} \parallel \overline{RQ}$ in the following figure. (If you find $m\angle R$, is there more than one method to find $m\angle P$)

Answer :

$$\angle P + \angle Q = 180^\circ \text{ (Angles on the same side of transversal)}$$

$$\angle P + 130^\circ = 180^\circ$$

$$\angle P = 50^\circ$$

$$\angle R + \angle S = 180^\circ \text{ (Angles on the same side of transversal)}$$

$$90^\circ + \angle R = 180^\circ$$

$$\angle S = 90^\circ$$

Yes. There is one more method to find the measure of $m\angle P$.

$m\angle R$ and $m\angle Q$ are given. After finding $m\angle S$, the angle sum property of a quadrilateral can be applied to find $m\angle P$.
