67. Given below are two statements:

Statement I: Griss-Ilosvay test is used for the detection of nitrite ion, which involves the use of sulphanilic acid and α -naphthylamine reagent.

Statement II: In the above test, sulphanilic acid is diazotized by the acidified nitrite ion, which on further coupling with α -naphthylamine forms an azo-dye.

In the light of the above statements, choose the correct answer from the options given below.

 (B) Both Statement I and Statement II are true
 (C) Both Statement I and Statement II are false
 (D) Statement I is false but Statement II is true
